PRE-APPEAL BRIEF REASONS FOR REVIEW

MS AF
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Dear Sir:

INTRODUCTORY COMMENTS

Prior to proceeding with the full appeals process, Applicant respectfully requests a panel review of the pending rejections of claims 14 – 28 in the final Office Action, dated April 6, 2006, in view of the Remarks below and in conjunction with the Notice of Appeal filed concurrently with this Request.

A Petition for Extension of Time is filed concurrently herewith.

Remarks begin on page 2 of this paper.

REMARKS

The application includes 21 claims. To expedite the appeal, claims 29 – 34 are canceled herewith. Of the remaining claims 14 – 28, claims 14 and 16 are independent.

Claim 14 is directed to a mattress that includes an enclosure having a substantially rigid bottom panel and a sidewall forming a cavity, in which an innercore is placed. The innercore is joined to the bottom panel by an adhesive only along the sidewall, with a remaining portion of the bottom surface being unattached to the bottom panel.

Claim 16 recites subject matter similar to that of claim 14, reciting specific groups of materials for the platform.

Claims 14 and 16 stand rejected under 35 U.S.C. §103(a) as being unpatentable over US patent No. 5,065,485 to Zocco.

For an office action to establish a prima facie case of obviousness against a claim, the prior art reference or references used to form the rejection must, either alone or in combination, teach or suggest all the claim limitations. MPEP § 2143. The cited reference, however, fails to teach or suggest all of the limitations of independent claims 14 and 16.

While Applicant concedes that Zocco discloses a perimeter sidewall joined to the bottom panel/platform and defining an interior cavity, and an innercore disposed within the cavity, Applicant must respectfully disagree with the Examiner's two other assertions, namely that Zocco discloses a substantially rigid bottom panel (claim 14), and that "a portion of the bottom surface of the innercore is joined to the bottom panel by an adhesive in a region proximate to the perimeter sidewall, with a remaining portion of the bottom surface being unattached to the bottom panel," as recited in independent claim 14, and with similar language in independent claim 16.

Regarding the alleged disclosure by Zocco of a substantially rigid bottom panel, Zocco describes his innerspring mattress cover as follows:

Bottom (10) and top (11) panels are made of the same density foam. The frame (1), which is preferably made of higher density foam than the top (11) and bottom (10) panels, holds components of the invention within the frame (1) during assembly of the device, and also gives a person sleeping on the enclosed innerspring

mattress subassembly (100) complete edge support, and 100% sleeping surface edge support.

Since the bottom (10) (and likewise the top (11)) are made of a lower density foam, they cannot be considered as being "substantially rigid", as recited in line 2 of claim 1.

Regarding the alleged attachment of the innercore to the bottom panel/platform, Zocco discloses in col. 3, line 64, to col. 4, line 10, of the '485 patent:

A filling material (3) is then laid into the opening (2) in the frame. The filling material (3) may be made of any common mattress filling material, such as cotton, foam, poly-foam, wool or other fibers. The first layer of filling material (3) may be glued to the inside surface of the bottom panel (10). Either one or several layers of filling material may be used.

After the filling material (3) is placed inside of the frame (1), an innerspring insulator (4) is placed upon the filling material (3). The insulator (4) layer may be made of any common mattress insulator material, such as sisal, coconut fiber, burlap, resin-treated pads, or similar material. The insulator (4) prevents the filling material (3) from falling into the mattress spring (5) after the device has been assembled.

Zocco glues the insulator (3) to the top (10) and bottom (11) panels. Zocco states explicitly (col. 4, lines 12 – 13; and also col. 6, lines 17 – 18) that "[a]fter the insulator (4) is placed inside of the frame (1), an innerspring (5) is placed inside of the frame, centered within the frame." {Emphasis added} Accordingly, Zocco does not disclose or suggest gluing the innercore mattress subassembly (100) to the bottom panel/platform or to anything else.

Zocco further discloses (col. 6, lines 60 – 63) as an alternative approach that "[a]n enclosed innerspring mattress of essentially the character of the preferred embodiment can be constructed without gluing of the filling material to the top and bottom panels." This further demonstrates that Zocco does not attach the innercore mattress subassembly with an adhesive.

Zocco therefore fails to disclose that the innercore is joined to the bottom panel by an adhesive. Only the insulator (3) and possibly the filling material (4) are joined to the bottom panel by an adhesive, while the innercore simply placed on top of the insulator/filling material.

The Office Action further states that applying the adhesive in a specific pattern would be an obvious modification, as would be application of an adhesive in a region proximate to the perimeter of the side wall with a remaining portion of the bottom surface being unattached to the bottom panel.

U.S. Patent 5,040,255 to Barber, now applied in conjunction with Tocco against 15 and 24, was previously cited in the Office Action dated October 17, 2005, against original claims 14 – 28. Barber states: “Glue or adhesive is applied at location 50 and 52, on the bottom surface of insulator 22 and the top surface of insulator 20 to maintain the relative position of springs 30 and assembly 18.” (col. 2, lines 15-41). Barber’s string of encased springs or spring casing assembly 18 is joined by an adhesive to the interior of the cavity. (col. 1, lines 35-39). Barber leaves no doubt that the entire surface of the top side of insulation piece 20 is coated with an adhesive.

To provide support for the springs and maintain the relative position of springs in the cavity, Barber needs to attach substantially all the spring to the bottom of the cavity. Attaching the springs in the cavity only along the perimeter would render Barber's invention so modified unsatisfactory for its intended purpose, so there is no suggestion or motivation to make the proposed modification. *In re Gordon*, 733 F.2d 900, 221 USPQ 1125 (Fed. Cir. 1984)

The specific pattern recited in claims 14 and 16 was carefully selected by the inventors to replace the conventional attachment of the innerspring unit to a lower border wire which is then joined to the support layer. (see paragraph [0007] of the originally filed specification).

"To support the conclusion that the claimed invention is directed to obvious subject matter, either the references must expressly or impliedly suggest the claimed invention or the examiner must present a convincing line of reasoning as to why the artisan would have found the claimed invention to have been obvious in light of the teachings of the references." *Ex parte Clapp*, 227 USPQ 972, 973 (Bd. Pat. App. & Inter. 1985).

None of the references expressly or impliedly suggest applying the glue over less than the entire surface or in a specific pattern. Moreover, the Examiner fails to present a convincing line of reasoning as to why the artisan would have considered it obvious to apply the glue in the specific claimed pattern in light of the teachings of the references.

Claims 14 and 16 are therefore patentable over the references of record.

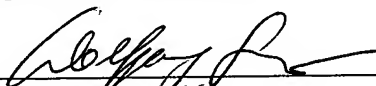

Claims 15 and 20 – 28 which depend from independent claim 14, and claims 17 – 19, which depend from independent claim 16, are therefore also patentable for at least the reasons that claims 14 and 16 are patentable.

Thus, Applicant requests reconsideration and withdrawal of the §103 rejections of claims 14 – 28.

Applicant believes no fee is due with this response. However, if a fee is due, please charge our Deposit Account No. 18-1945, under Order No. SMCY-P02-099 from which the undersigned is authorized to draw.

Dated: October 6, 2006

Respectfully submitted,

By 
Wolfgang E. Stutius
